## ***Benefits of Native Wildflowers and Grasses***

Everyone's interest in native plants is growing. People are planting them in all sorts of places. They are beautifying homes, businesses and roadsides as well as helping to create wonderful new parks and recreation areas. Farmers are discovering that native plants are even great for forage. Native plants (those growing here prior to the time of European settlement) provide **great beauty** and are **well adapted** to our unique climate and soils.

### ***Benefit to the Environment...***

Native plants generally need less maintenance and care than traditional landscape plants. Landscapes that include native plants help the environment by reducing the amount of water, fertilizer, pesticides and fuel that would otherwise be needed. Planting more of these plants can help increase the number and the diversity of these species which have otherwise become relatively rare.

### ***They are economical too...***

Saving our resources saves money. Lower maintenance means lower fuel, water, and chemical bills, leaving money in your budget to spend on other things.

### ***They attract wildlife...***

Planting native species restores an ecological balance that includes an increase in wildlife. Depending on the location and the species planted, you'll see an increase in butterflies and other insects, song and game birds, and other wildlife such as deer.

## ***Professional Advice Quality Seeds and Plants***

Whether you are planting a conservation project, a native restoration, or a small urban landscaping project, **native species** are for you!

Whatever your project, using native species means low maintenance. However, no matter what the scope of the project, low maintenance does not mean "no maintenance" nor does it mean letting it go "back to nature". Landscapes "naturalized" with native plants require proper species selection, site preparation, establishment and maintenance. Special attention should be given to local ordinances to create plantings that are appropriate to each particular setting.

The MNNWGPA promotes the responsible use of high quality, regionally adapted native plants and seeds. Members of the association support the preservation of endangered native plant communities and therefore will not sell plants taken from the wild, will give preference to local genotypes, and will use native prairie mulches free of noxious weeds.

Properly established and maintained, native wildflowers and grasses make a special place – one to enjoy for generations!

Think "**Natives**" for your next project, large or small. Whether it involves a hard to maintain yard, conservation project, highway construction, new park or brightening up a corner of your garden, give one of the professionals listed in this brochure a call. You can depend on their advice and the high quality of their plants and seeds.
